

Maragal Medical is proud to introduce

Breakthrough Wound Care

Innovative wound dressing AmnioWrap2 leverages regenerative medicine to better manage non-healing wounds.

A wound that hasn't healed by 53% within the first 30 days is unlikely to heal completely within 12 weeks. As a provider, you know this statistic from the American Diabetes Association all too well. Chronic, non-healing wounds can lead to severe complications. Don't take chances when innovative treatments are available.

The team at Maragal Medical has seen the power of regenerative medicine on wound care firsthand and are proud to partner with Venture Medical to offer AmnioWrap2 to help tackle stubborn wounds and accelerate healing. If you've tried traditional wound care on your patient for 30 days without success, AmnioWrap2 is covered by Medicare B. Plus, by partnering with Maragal, one of our Wound Care Certified Nurse Practitioners will come to your facility to apply this dressing to your patient on a weekly basis until the wound heals, typically 10-12 weeks.

Help more patients treat acute and chronic wounds with AmnioWrap2 from Maragal Medical.

Protective Barrier

AmnioWrap2 allografts act as a protective covering over the wound bed or surgical site, providing key components, including growth factors, chemokines, and cytokines.

Ideal Environment

Natural antimicrobial properties slow the growth of bacteria and decrease inflammation. The environment supports tissue repair, reconstruction, and replacement.

Easy to Apply

Applications are easy to handle and conform to the wound site. They are packaged dry, and stored at room temperature and offer a 4-year shelf life.

Why AmnioWrap2?

If you have a patient with a wound that isn't healing, even after antibiotic treatment and surgical intervention, you have a new tool in your arsenal. AmnioWrap2 is a natural, minimally manipulated structural allograft intended for use as a protective covering for soft tissue wounds. It supports wound management, helps prevent painful infections and in very serious instances, amputation.

Your patients will appreciate AmnioWrap2 for its:

- Non-invasive therapy
- Low risk of complications
- Minimal side effects
- Reduction in inflammation, swelling, and pain
- Ability to heal wounds faster than standard treatments
- Reduced scarring

What's in AmnioWrap2?

- Collagen
- Laminin
- Fibronectin
- Over 200+ cytokines and chemokines
- Hyaluronic acid

Regenerative Wound Therapy Transforms Wound Care

Providers appreciate the patented six-step process that preserves the integrity of the amniotic tissue critical to the wound care healing process:

1. Disinfection

Eliminates pathogens without damage

2. Reduction

Manual hematopoietic process protects membrane

3. Cleansing

Removes debris while preserving growth factors

4. Dehydration

Preserves tissue structure and prevents damage

5. Placement

Precise-cutting dies to ensure optimal quality

6. Sterilization

Grafts are sterilized with a low-dose electron beam
